has vast experience in working within the retail arena.

As the leading specialist in retail technology mounting, Ergonomic Solutions continually strives to develop and supply innovative products to meet the retailers' needs.

Since the introduction of Chip & PIN, the focus of organised crime and occasional random acts of vandalism has been centred on payment terminals. The frequency of tampering with, or even stealing them is on the increase. These sometimes sophisticated attacks can incur great expense to retailers and severely damage reputations.

In response, Ergonomic Solutions has developed **Safeguard**, a security device that enhances the physical security of payment terminals at the point of sale. The clamps are designed to complement the current range of SpacePole® security accessories.

Key Features

Each clamp tightly locks around the payment device and can then either be fixed onto the SpacePole® mount or have a secure 'tethered' cable attached, retaining the generic SpacePole® feature of being able to remove the terminal for accessibility.

Safeguard can be supplied in a variety of colours which clearly identify the security feature, discouraging any tampering or potential skimming.

Ergonomic Solutions has close relationships with all the major payment terminal providers and

The design of the clamp is dependent upon the type of payment terminal
